CAREER OBJECTIVE

Motivated Computer Engineering student eager to grow as a **Full Stack Developer** and **AI Engineer** by combining expertise in modern frameworks (React Native, Next.js, FastAPI) with applied machine learning and intelligent automation. Seeking opportunities to contribute to impactful real-world products at the intersection of software engineering and artificial intelligence.

EDUCATION

Advanced College of Engineering and Management <i>Bachelor of Engineering in Computer Engineering</i>	Kathmandu, Nepal <i>2022 – Present</i>
Kathmandu Model College (KMC) <i>Higher Secondary Education (Science – Grade 11 & 12)</i>	Bagbazar, Kathmandu <i>Completed 2022</i>
Ideal Model School <i>Secondary Education Examination (SEE)</i>	Dhobighat, Lalitpur <i>Completed 2020</i>

TECHNICAL SKILLS

Languages: JavaScript, Python, HTML, CSS
Frontend: React.js, Next.js, Tailwind CSS
Backend: Node.js, Express.js
AI & ML: CNN, VGG19, ResNet50, Whisper AI, n8n (AI workflow automation)
Databases: MongoDB, Firebase FCM
ORM & Auth: Prisma ORM, JWT Authentication
Tools & Platforms: Git, GitHub, Supabase

PROJECTS

Help Sathi | *React Native (Expo), FastAPI, CNN + GRU, Whisper AI, MongoDB, Firebase FCM*

- Built an Android mobile app (distributed via link, not Play Store) designed to protect users in distress, particularly in sexual harassment situations.
- Integrated a CNN + GRU deep learning model with Whisper AI to detect user emotion and distress from speech in both Nepali and English in real time.
- Implemented an automatic SOS alert system that triggers an alarm sound and dispatches an emergency notification with location to pre-set emergency contacts via Firebase FCM.
- Designed a FastAPI backend with MongoDB for data storage, user authentication, and role-based access control.

Brain Tumor Detection | *Python, CNN, VGG19, ResNet50, Image Classification*

- Built and compared multiple deep learning models (CNN, VGG19, ResNet50) for classifying brain tumors from MRI scan images.
- Applied transfer learning with VGG19 and ResNet50 to improve classification accuracy over a baseline custom CNN.
- Performed data preprocessing, augmentation, and model evaluation using standard medical imaging metrics.

Interview AI | *React.js, Node.js, Express.js, MongoDB, JWT, Gemini AI, Puppeteer*

- Built a full-stack Generative AI platform for resume analysis, job description matching, skill-gap detection, AI-powered interview preparation, and ATS-optimized resume generation using React, Node.js, MongoDB, JWT, Gemini AI, and Puppeteer.

CURRENTLY LEARNING

Sharpening intermediate-level full-stack development skills across frontend and backend technologies, while actively learning AI integration pipelines to build smarter, more capable web applications.
